

HAPPY NEWS

KIDS

We're back with a round up of our favourite stories from over the summer!

1. Barbie with Diabetes

A new Barbie has been released with Type 1 diabetes, and she comes with tiny medical gadgets like a glucose monitor and insulin pump. Type 1 diabetes is an illness that affects the pancreas - an important organ in your body that helps turn food into energy.

3. Poo power!

A farm in Wiltshire has spent £275,000 on a special machine that turns cow poo into electricity and heat. It uses waste from 100 cows every day to power half of the farm's milking system, saving money, cutting pollution - and even reducing the smelly smells!

4. Rockstars tackle bullying

Two rockstars are on a mission to stop bullying! Baz and Adam from the band Massive Wagons are visiting schools in England to share their own stories of being bullied, and to remind everyone through song that "bullying is not ok" and no one is ever alone.

5. The young eco warrior

A 12-year-old girl in India has planted over 150,000 trees! Prasiddhi Singh is creating mini forests in her community, helping nature thrive, and inspiring others with her motto: "Generate oxygen, Grow food, Gift back to your community."

7. Sea urchins love to wear hats

In 2020, scientists noticed that sea urchins often put little objects like shells or rocks on their heads, and found they'll happily wear just about anything, even tiny hats! The story has been making the rounds again, because people just can't get enough of these cute creatures in their adorable headgear!

2. Happy paws!

Helsinki in Finland has launched the world's first sightseeing tour just for dogs, called The Doggy Route to Happiness. It includes a puppy café and even a dog-only island - because dogs deserve happiness too!

6. Hairy toothpaste?

Scientists say we could soon be brushing our teeth with 'hairy toothpaste!' But don't worry, you won't actually see or feel it. Researchers at King's College London discovered that keratin - a protein found in hair - can protect and even repair your teeth when mixed with saliva.
